The screenshot shows a web application running at `127.0.0.1:3000/assignCompSuper/5`. The application has a search bar, a user profile icon, and an "Assign student" button. The network tab in Chrome DevTools shows a list of requests. A specific request is selected, showing its response in the "Response" tab. The response is a JSON object representing a student:

```
{  "first_name": "Ali1",  "last_name": "Mostafa",  "user": 2,  "company_supervisor": {    "first_name": "Khaled",    "last_name": "Saleh",    "user": 5  },  "company": {    "name": "Coders",    "comp_id": "145",    "user": 4  }}
```

Handwritten Arabic notes on the network tab state: "هنا لازم نعمل انه بيبي كذا Student وتقسفها معلومة" (Here we need to make it so it looks like a Student and we will give it information).

The screenshot shows a REST client interface with a GET request to `http://127.0.0.1:8000/users/user/companysuper/5/students`. The "Send" button is highlighted. The "Response" tab shows a list of 5 items, numbered 1 through 5. Handwritten Arabic notes include "URL" and "Send".

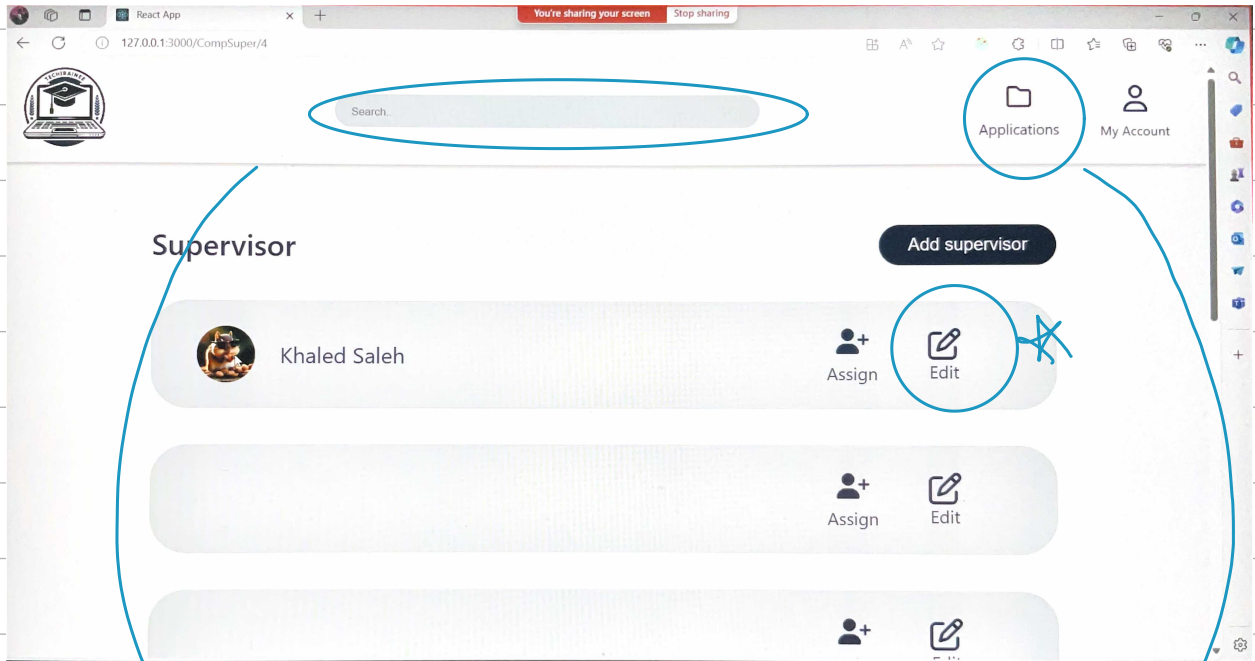

assignCompSuper/cid>

The screenshot shows the web application interface. The user profile "Khaled Saleh" is visible. Below it, the "Current Student" section shows a card for "Ali1 Mostafa" with a "delete" button. The "Assign student" button is circled in red. Handwritten Arabic notes include "لازم نعمل هاي الكمية" (We need to make this quantity).
